PROJECT EXPERIENCE

● **Portfolio Website:** This web application displays and showcase my projects.This project is a responsive website featuring media queries, dynamic Javascript animations, and modern CSS technologies such as Sass. It is hosted on AWS.

- **React Mad Libs:** -This application displays Two Way Binding in React with Inputs and State, Set State on Multiple Inputs to render multiple inputs in React. CSS Grid was used to lay out components. Hosted in Heroku.

- **React Course Scheduler App:** This project features a progress tracker with add and remove button features to display student progress. I created the Icon components using CSS Styling components, Aligned Nested scheduling elements with CSS Grid to render content in React. Mocked API data for schedule course.

- **React Asset Management App:**- This application features a Functional Calendar feature with CSS Grid and Flexbox for format and layout of application, using Javascript timing events. Integrated React Redux to manage application state, Mocked API data for scheduling features.
